Introduction

Thank you for your interest in **JSN Mico** template. We really appreciate your choice and truly wish our product will bring more value to your website and business.

To have the best template understanding, we recommend you read documentation in the following order:

1. **JSN Mico Quick Start Video** – This video will tell you how to quickly make the template look like the demo website as well as the main concept of how to work with the template. [Click here to see online video.](#)
2. **JSN Mico Configuration Manual** - This document will give detailed information about each template feature and how to apply it to your real website.
3. **JSN Mico Customization Manual** - This document will show you how to customize the template to make it suit your needs.

You can print all documents for convenient reading.

Let's roll!

Before we start

First thing we would like to say is this guide is not intended to cover everything you might want to customize in the template. Here we disclose only the most frequently asked customization questions. We hope you can find the answer for your question here and satisfied with it.

Must-have tools

FireBug

This is an extension for FireFox browser and is absolutely a must-have tool for template customization. It is capable of **showing you each HTML element** (html tags, javascript code, css code, etc.) on the webpage so it's really helpful in understanding the template structure. We **strongly recommend you** use FireFox browser with FireBug extension when doing template customization.

You can download FireBug from its official website for **free** <http://www.getfirebug.com/>

XRAY

XRAY is a bookmarklet for Internet Explorer 6+, and Webkit and Mozilla based browsers (including Safari, Firefox, Camino or Mozilla). Use it to see the box model for any element on any web page.

You can use this service for free here: <http://www.westciv.com/xray/>

PngOptimizer

PNG is the major graphic format used in our templates, so it's worth mentioning a very useful tool called PngOptimizer. Technically, it clears PNG files of junkie attributes not essential for web, which can greatly decrease the file size.

You can download PngOptimizer from its official website for **free** <http://psydk.org/PngOptimizer.php>.

See other FREE Hi-Quality Joomla Templates: <http://www.joomlashine.com/free-joomla-templates.html>

Recommend tool

JSN PowerAdmin

JSN PowerAdmin is a powerful tool that helps Joomla users enjoys Joomla with ease. This recommend tool is not only for Joomla newbies, but also advanced users. It gets “popular badge” on JED and receives nice feedback from Joomla community. You can download it for **free** here:

<http://extensions.joomla.org/extensions/administration/admin-navigation/20267>

JSN PowerAdmin main features:

- Search any items quickly in back-end with **Spotlight Search**
- Control the website content in one place with **Site Manager**

CSS Files Explanation

There are several CSS files included in the template. Here is quick description of them:

- **{color}.css** – contains specific styling for particular color variation. Only certain template color file will be loaded at a time.
- **{layout}.css** – contains specific styling for responsive layout and wide layout. These files are loaded only when responsive layout or wide layout are activated.
- **{styles}.css** – contains styling for text of template.
- **custom.css** – contains styling for your own customizations. This file is loaded first, before other css files.
- **error.css** – contains specific styling for error messages.
- **jsn_fixie7.css** – contains specific styling for Internet Explorer 7. This file is loaded only when user is using IE7 to view the website.
- **jsn_iconlinks.css** – contains specific styling for icon link feature. This file loaded only when template parameter **Enable Auto Icon links** is set to **Yes**.
- **jsn_rtl.css** – contains specific styling for RTL layout. This file is loaded only when RTL mode is activated.
- **jsn_social_icons.css** – contains specific styling for 12 social icons: Facebook, Twitter, Youtube, Google Plus, Pinterest, MySpace, Flickr, Dribble, StumbleUpon, Yahoo, Skype and RSS.
- **offline.css** – contains specific styling for offline page.
- **print.css** – contains specific styling for printing output.
- **template.css** – contains template styling. We built this all-in-one file to make it easier for you to find appropriate CSS styling and change. Also this reduces HTTP request amount to server.
- **template_pro.css** **PRO** – contains additional template styling for the purchased Edition of JSN Mico. These additional code includes some modification of layout, menu and typography.

File “template.css” outline

As mentioned before file template.css is the biggest file containing all template styling. To make it easier to for you to trace and edit, we arranged code into several sections. You can use text search for appropriate section name to jump to it.

Here is the outline of sections with subsections:

- **DEFAULT HTML**
 - General Styles, Text Styles, Heading Styles, Link Styles, List Styles.
- **LAYOUT**
 - General Layout, Overall Page, Layout Changing, Header Area, Menu Area, Content top Area, Content Area, Content Bottom Area, Footer Area.
- **TYPOGRAPHY**
 - Content Columns, Text Styles, List Styles, Images Styles.
- **MENU**
 - General, Main Menu, Tree Menu, Div Menu, Top Menu
- **MODULE STYLES**
 - Module Boxes
- **JOOMLA! DEFAULT EXTENSIONS**
 - PageBreak – Tab Style, PageBreak – Slider Style, Joomla! Extensions - General, Joomla! Extensions - Com_content, Joomla! Extensions - Com_contact, Joomla! Extensions - Com_search, Joomla! Extensions – Com_finder, Joomla! Extensions - Com_weblink, Joomla! Extensions - Com_newsfeed, Joomla! Extensions - Com_user, Joomla! Extensions - Popup Component, Joomla! Extensions - System messages, Joomla! Extensions - Mod_breadcrumb, Joomla! Extensions - Mod_login, Joomla! Extensions - Mod_search, Joomla! Extensions - Mod_newsflash.
- **JOOMLA 2.5 / 3.x CORE COMPONENT LAYOUT**

Find and edit elements on webpage

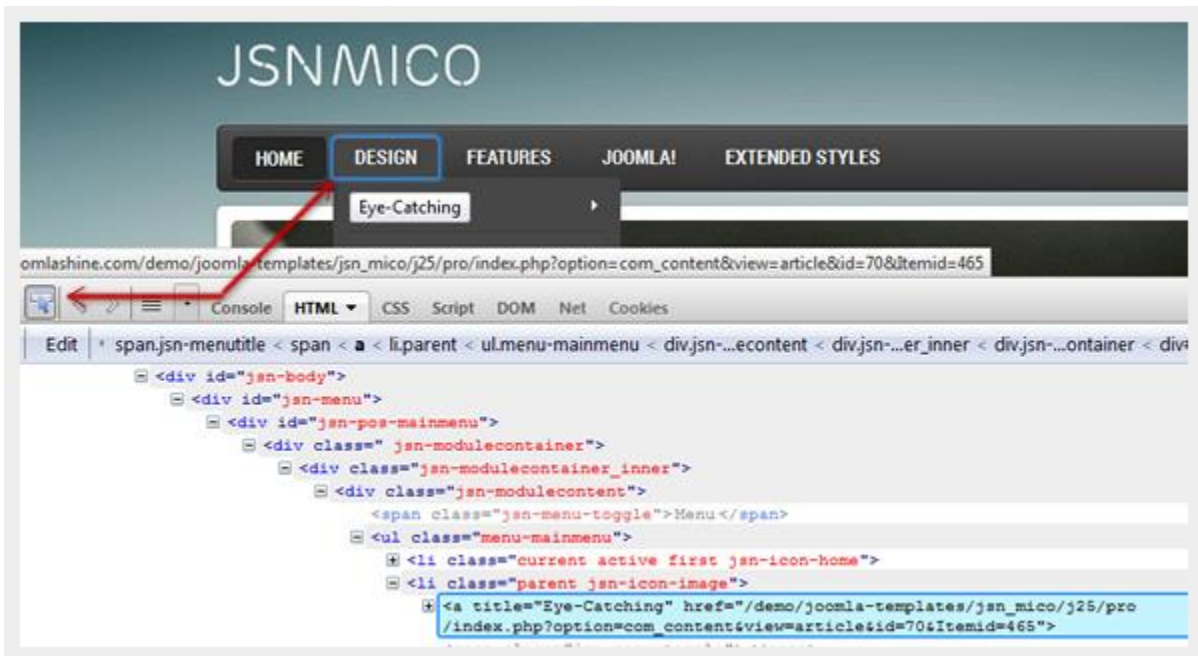

Most of the time, you will want to change CSS attribute of some elements you see on the webpage. Here is the guide of how you can do that really easily by using FireBug. Get it here <http://www.getfirebug.com/>

Step 1. Activate Firebug

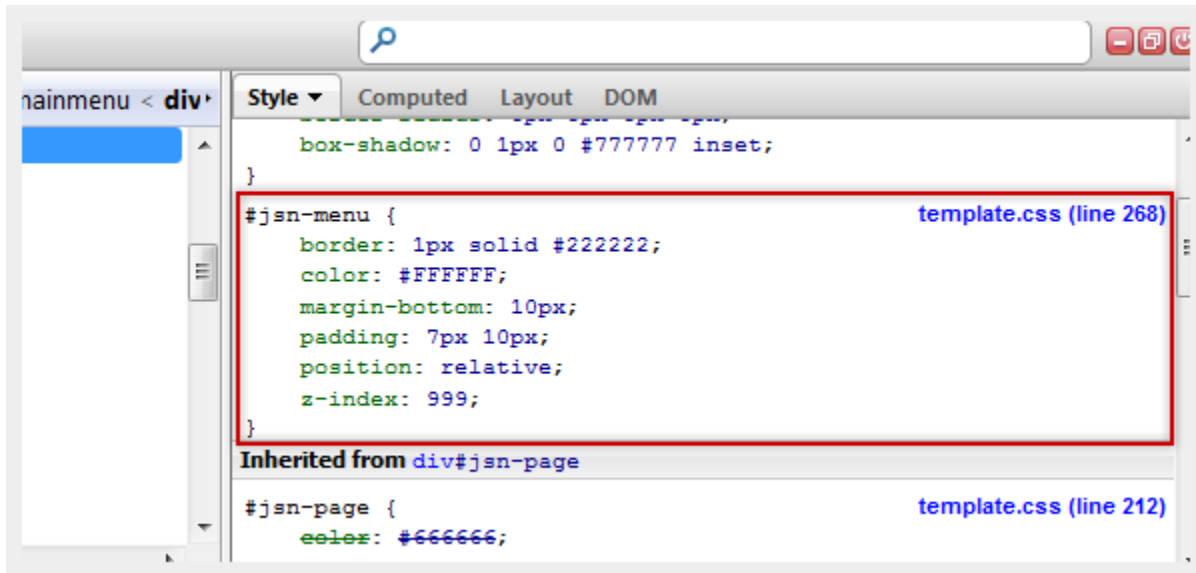

When FireBug installed, you should see small **Bug icon** at the bottom. Click on it to active FireBug.

Step 2. Inspect element

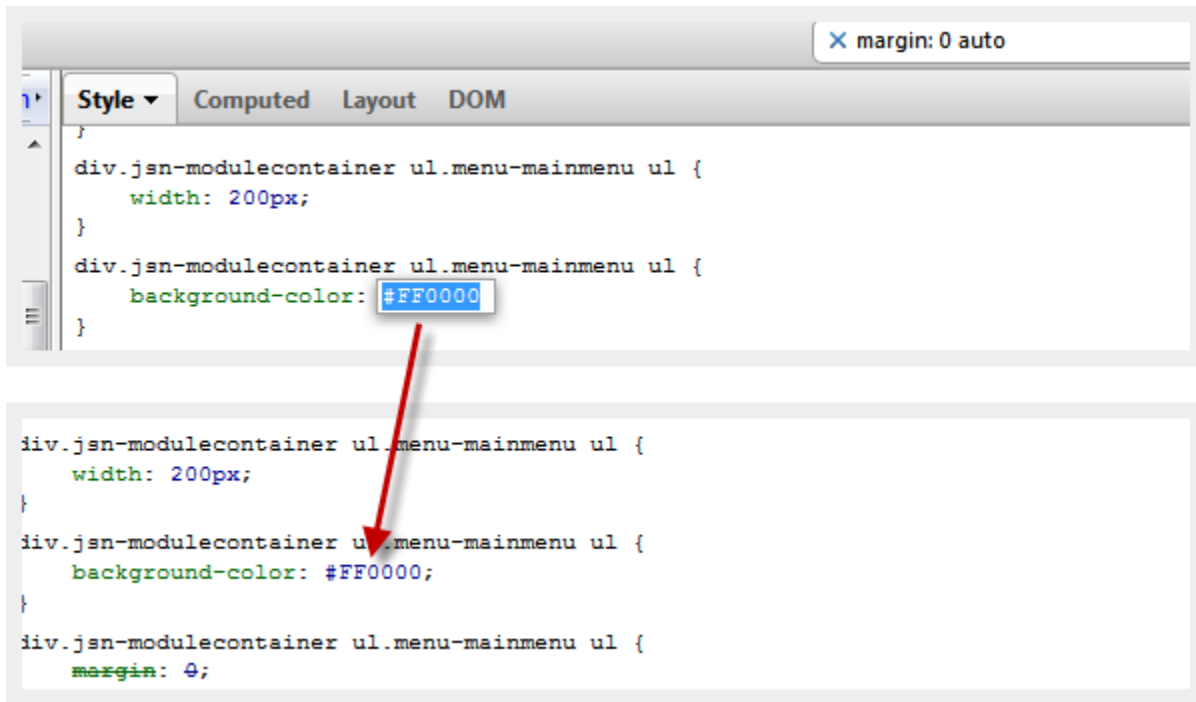

Now click on **Inspect icon** then point mouse cursor to the element you want to change CSS attributes.

Step 3. Editing CSS in live mode

Once you inspected some elements, all its attributes appear on the right panel, where you can edit CSS attributes directly and see how they are applied.

Step 4. Save changes to CSS file

Now, when you are happy with new CSS attributes, it's time to save those changes in CSS file.

1. Copy the whole CSS selector name
2. Open CSS file and use text search to find it
3. Type new CSS attributes in file and save it.

That's it, really easy and fast way to find and edit CSS attribute for any elements you see on the webpage.

Website title configuration

To change the website title, please take following steps:

1. In the Joomla administration panel, go to **Menus** -> **Main Menu**
2. Next, in **Menu Item Manager** page, select item **Home**
3. Next, **Menu Item** page, open section **Page Display Options** and change parameter **Browser Page Title** as you desire.

Template translation

Joomla! template has a powerful language mechanism which allows us to have template in multiple languages. All wordings in both back-end and front-end are moved to separated language files, so you can easily translate them into any language you want.

Here is what you need to do:

1. Install new language in your Joomla Back-end:
 - Go to **Extensions** → **Extension Manager** → **Install Languages**
 - Search for your expected language in the list and install it. For example, you install **German (de-DE)**.
2. Go to the location:
{joomla_root_folder}/plugins/system/jsntplframework/language/en-GB.
Make a copy of the current English language file **en-GB.tpl_jsn_mico_XXX.ini**, where XXX is the template edition you have. Give it an appropriate name of your language, like **de-DE.tpl_jsn_mico_XXX.ini**.
3. Make a new folder, depend on your new language you want to add, like:
{joomla_root_folder}/plugins/system/jsntplframework/language/de-DE
Then put your new file **de-DE.tpl_jsn_mico_XXX.ini** there, start translating the text strings in this file.
4. Back to the parent folder, open file **jsntplframework.xml**;
Go to the section `<language> ... <language>`, then add:
`<language tag="de-DE">language/de-DE/de-DE.plg_system_jsntplframework.ini</language>`
5. Copy your file **de-DE.tpl_jsn_mico_XXX.ini** to corresponding folder:
{joomla_root_folder}/administrator/language/de-DE
6. Afterward, selecting your own language as the default language in Joomla! and you will see all your native wordings as that in the template language file.

Each Joomlashine template supports 14 languages. So if the language you want to install is already in template supported list, you can skip Step 2 and start translating the existing language file.

Unicons

By default, JSN Mico is shipped with **20 carefully selected icons** which can be used for multiple purposes. We call this concept **Unicons**. But sometimes you may want to use your own icons. There are 2 common cases when you want to customize the Icon Menu.

Replace an existing icon in sprite image file

This is the situation when you want a better looking icon but with the same meaning, i.e. icon name.

1. Create your own icon with size 18 x 18 and save it to a separated (temporary) file;
2. Open the sprite image file **icons-uni.png** in folder **images/icons** in some graphic editor like Fireworks or Photoshop;
3. Drag your newly created icon file to the sprite image file opened in a graphic editor and place it on top of the icon you want to customize;
4. Save the sprite image file and delete the temporary icon file if you want. Don't forget to compress the file by **PngOptimizer**.
5. Re-upload file to the server overwriting the old file.

Clear browser's cache and refresh your website. Now you should see your upgraded icon.

Add new icon to sprite image file

This is the situation when you want to add a brand new icon to the sprite image file and use it. For example, you want to add an icon with symbol **\$** and call it **cash**. There are 2 stages involved:

Stage 1: Add new icon to sprite image

1. Create your own icon with size 18 x 18 and save it to a separated (temporary) file with any name you want;
2. Open the sprite image file **icons-uni.png** in folder **images/icons** in some graphic editor like Fireworks or Photoshop and expand the canvas size to **86px** or more;
3. Drag your newly created cash icon file to the sprite image file opened in a graphic editor, place it at the end of the file with the distance **70px** from the most bottom icon in the sprite image file.

Save the sprite image file and upload it to server overwriting the original file.

Stage 2: Modification of template code for new sprite image

1. Open file **template.css** in folder **css**
2. Find the section code **GENERAL ICON ASSIGNMENT**, you can use text search for this task.
3. Add the following CSS code:

```
.link-icon.jsn-icon-article,  
.menu-iconmenu .jsn-icon-article > a > span,  
.list-icon.jsn-icon-article li .jsn-listbullet,  
.jsn-icon-article h3.jsn-moduletitle span.jsn-moduleicon {  
    background-position: 0 -1800px;  
}
```

Here, **article** is the name of your new icon and **-1800px** is the position of new icon in the sprite image.

4. Save the CSS file and upload it to your server overwriting the original file.

Now you can use new icon with name **article**.

Making all modules in position “top” followed one below another

By default, all modules published in position **top** are arranged in a horizontal line. If you want modules to be followed one below another, please take following steps:

1. Open file **template.css** in folder **css**
2. Find CSS selector **#jsn-pos-top div.jsn-modulecontainer** and change the attribute **float: left;** to **float: right;** add attribute **clear: right;**. As the result, you should have:

```
#jsn-pos-top div.jsn-modulecontainer {  
    float: right;  
    margin: 0 0 0 20px;  
    clear: right;  
}
```

Save the CSS file and re-upload it to server overwriting the original file.

General Layout

Main background customization

JSN Mico is shipped with 6 built-in colors for the side background, but you are free to customize it:

Images customization

1. Prepare the background images with the name **bg-master.jpg**.
2. Copy your new background image to folder **backgrounds** under the template folder. It looks like **joomla_root_folder/templates/jsn_Mico_XXX/images/colors/YYY**, where XXX is the template edition you have and YYY is the current color you are using.

Now you can clear your browser's cache and refresh your website to see the result.

Making the whole page left-aligned

By default, JSN Mico was designed in center alignment. To make page left-aligned, please take following steps:

1. Open file **template.css**
2. Find CSS selector **#jsn-header-top, #jsn-header-bottom-inner, #jsn-content, #jsn-promo-inner, #jsn-pos-content-top, #jsn-pos-promo_inner, #jsn-pos-content-bottom-over, #jsn-content-bottom-inner, #jsn-footer-inner** and remove the attribute **margin: 0 auto**
3. Save the CSS file and re-upload it to your server overwriting the original file.

Now the page will be left-aligned.

Template font size and style customization

By default, JSN Decor has 3 text styles and 3 text sizes, each of which has its own settings. Sometimes you might want to change those settings.

- **font-family** in tag **body** defines font format for content text, in both normal style and special style.

```
/*  
@import url(http://fonts.googleapis.com/css?family=Roboto+Condensed:regular,bold);  
  
body {  
    font-family: Arial, Helvetica, sans-serif;  
}  
body h1,  
body h2,
```

- **font-family** in array **body** defines font format for heading / menu text, in normal style.

```
body {  
    font-family: Arial, Helvetica, sans-serif;  
}  
body h1,  
body h2,  
body h3,  
body h4,  
body h5,  
body h6,  
body #jsn-menu a,  
body #jsn-menu span,  
body #jsn-gotoplink,  
body .componentheading,  
body .contentheading {  
    font-family: Verdana, Geneva, Arial, Helvetica, sans-serif;  
}
```

- **font-family** in array **body.jsn-specialfont** defines font format for heading / menu text, in special style.

```
}  
body.jsn-specialfont h1,  
body.jsn-specialfont h2,  
body.jsn-specialfont h3,  
body.jsn-specialfont h4,  
body.jsn-specialfont h5,  
body.jsn-specialfont h6,  
body.jsn-specialfont #jsn-menu a,  
body.jsn-specialfont #jsn-menu span,  
body.jsn-specialfont #jsn-gotoplink,  
body.jsn-specialfont .componentheading,  
body.jsn-specialfont .contentheading,  
body.jsn-specialfont .breadcrumbs,  
a {  
    font-family: 'Roboto Condensed', Verdana, Geneva, Arial, Helvetica, sans-serif;  
}  
body.jsn-textsize-small {
```

See other FREE Hi-Quality Joomla Templates: <http://www.joomlashine.com/free-joomla-templates.html>

- **body.jsn-textsize-small** defines font-size for **Small** text size.
- **body.jsn-textsize-medium** defines font-size for **Medium** text size.
- **body.jsn-textsize-big** defines font-size for **Big** text size.

For example, we will customize the default font settings of **Business** style, special font with heading / menu text from **Roboto Condensed** to **Open Sans** as an example:

1. Open file **business.css** in folder **template/css/styles**.
2. Find the link **@import**
url(<http://fonts.googleapis.com/css?family=Roboto+Condensed:regular,bold>); and change to
@import url(<http://fonts.googleapis.com/css?family=Open+Sans>);

```
/*  
@import url(http://fonts.googleapis.com/css?family=Roboto+Condensed:regular,bold);  
  
body {  
    font-family: Arial, Helvetica, sans-serif;  
}  
body h1,  
body h2,
```

3. Edit the special font family from **Roboto Condensed** to **Open Sans**

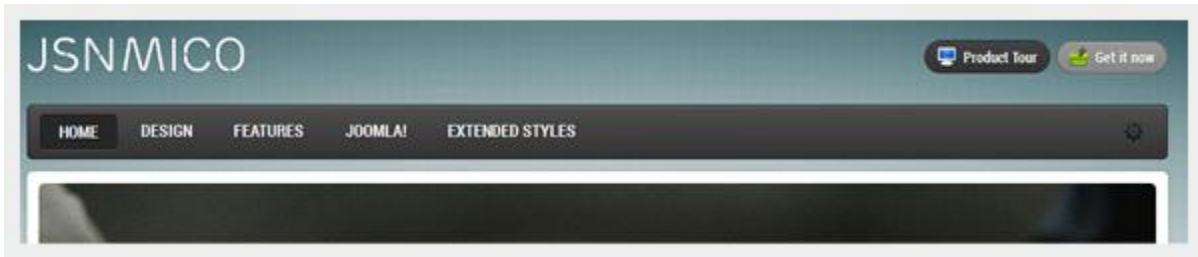

```
}  
body.jsn-specialfont h1,  
body.jsn-specialfont h2,  
body.jsn-specialfont h3,  
body.jsn-specialfont h4,  
body.jsn-specialfont h5,  
body.jsn-specialfont h6,  
body.jsn-specialfont #jsn-menu a,  
body.jsn-specialfont #jsn-menu span,  
body.jsn-specialfont #jsn-gotoplink,  
body.jsn-specialfont .componentheading,  
body.jsn-specialfont .contentheading,  
.breadcrumbs,  
a {  
    font-family: 'Roboto Condensed', Verdana, Geneva, Arial, Helvetica, sans-serif;  
}  
body.jsn-textsize-small {
```

4. Save the edited CSS file and re-upload it to your server overwriting the original file.

Refresh the browser cache and check the result.

Header

Header background customization

By default, the header area has one background color, but you are free to change it or add background image as you want.

1. Open template CSS file **template.css**.
2. Go to the section **Header area**, add CSS selector **#jsn-header** and:
 - Add the CSS attribute **background** with the color you want.
 - Add the CSS attribute **background-image** with URL to your header background image.
3. Save the CSS file and upload it to your server overwriting the old file.

Refresh the browser cache and check the result.

Flash logo implementation

By default, JSN Mico allows you to use your own logo image file by simply adjusting the appropriate template parameter. But sometimes you may want to use a flash file as the logo image.

For example, the following steps will display flash file **logo.swf** with dimension of **185 x 84 pixels** and located in folder **joomla_root_folder/images**

1. In the Joomla administration panel. go to **Extensions -> Module Manager**
2. Click button **New** on the toolbar and select item **Custom HTML**
3. In the module configuration page, set parameters as following:
 - Title: **Flash Logo** (or any other you like)
 - Show title: **No**
 - Enabled: **Yes**
 - Position: **logo**
 - Menus: **All**
 - Custom Output:

```
<object classid="clsid:d27cdb6e-ae6d-11cf-96b8-444553540000"
codebase="http://fpdownload.macromedia.com/pub/shockwave/cabs/flash/swflash.
cab#version=8,0,0,0" width="128" height="37" id="logo" align="middle">

<param name="allowScriptAccess" value="sameDomain" />

<param name="movie" value="images/logo.swf" /><param name="quality"
value="high" /><param name="bgcolor" value="#ffffff" /><embed src="
images/logo.swf" quality="high" bgcolor="#ffffff" width="128" height="37"
name="logo" align="middle" allowScriptAccess="sameDomain"
type="application/x-shockwave-flash"
pluginspage="http://www.macromedia.com/go/getflashplayer" />

</object>
```

Note: You should paste code above directly into HTML code panel, not in the WYSIWYG editor

4. Click **Save** and go to your website to check. Now, the flash logo should appear replacing the regular one.

Note: By utilizing flash logos, all template parameters related to logo will not have any affects.

Menu

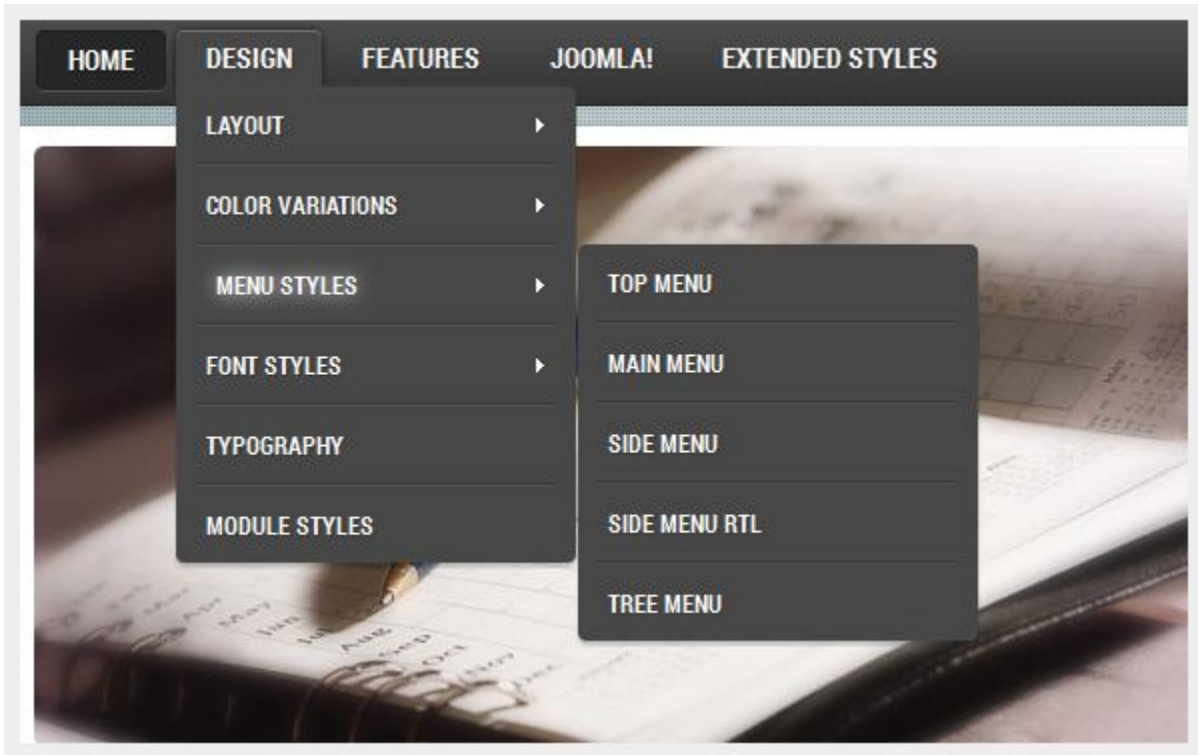

Main menu

Sometimes you might want to change background color of main menu bar. Here is how to do that:

1. Open template CSS file **template.css**.
2. Find CSS selector **#jsn-menu** and modify attributes as desired.
3. Save the CSS file and upload it to your server overwriting the old file.

Submenu panels

You can change the color of submenu items if you want. Please take following steps:

1. Open template CSS file depending on the parameter **Template Color** you are using. For example, if you are using **Grey** color then you open CSS file **grey.css**.
2. Find CSS selector **div.jsn-modulecontainer ul.menu-mainmenu ul** and set attribute **background-color** to your own color or replace it by attribute **background** to change both background color and background image. This is styling for submenu panel background color.
3. Find CSS selector **div.jsn-modulecontainer ul.menu-mainmenu ul li a** and change the color hex code of top / bottom border. This is styling for submenu item in the regular state.
4. Find CSS group of selectors begin with **div.jsn-modulecontainer ul.menu-mainmenu ul li: hover** and change the color hex code . This is styling for the submenu in the mouse over state.

Save the CSS file and upload it to your server overwriting the old file.

Moving the whole Menu bar to the bottom of Promo area

By default, Menu bar is placed on top of the Promo area, but if you want, you can place it underneath. Please take following steps:

1. Open file **index.php**
2. Cut the whole code block from here:

```
<?php
    if ($this->helper->countPositions('mainmenu', 'toolbar') || $this->
?>
    <div id="jsn-header-bottom-inner">
        <div id="jsn-menu">
            <?php
                /*===== Show modules in position "mainmenu" =====*/
                if ($this->countModules('mainmenu') > 0) {
                    ?>
                    <div id="jsn-pos-mainmenu">
                        <jdoc:include type="modules" name="mainmenu" style="jsn
                    </div>
                <?php
                }
            ?>
            <?php
                /*===== Show elements in Sitetools =====*/
```

To here:

```
                /*===== Show modules in position "toolbar" =====*/
                if ($this->countModules('toolbar') > 0) {
                    ?>
                    <div id="jsn-pos-toolbar">
                        <jdoc:include type="modules" name="toolbar" style="jsnmodule" />
                    </div>
                <?php
                }
            ?>
        </div>
    <?php
    }

    /*===== Show modules in content top area =====*/
    if ($jsnutils->countPositions($this, array('promo-left', 'promo', 'promo-ri
    ?>
    <div id="jsn-content-top">
        <div id="jsn-promo" class="clearafter">
```

3. And paste it between following lines:

```
}  
?>  
    <!-- Place your code right here -->  
  
    <div id="jsn-content" class="<?php echo (($has_left)?'jsn-hasleft ':'<br><div id="jsn-content_inner"><br>    <div id="jsn-maincontent"><br>        <div id="jsn-maincontent_inner"><br>            <div id="jsn-centercol"><br>                <div id="jsn-centercol_inner"><br>                    <?php<br>                        /*===== Show modules in position "breadcrumbs"<br>                        if ($this->countModules('breadcrumbs') > 0) {<br>                        ?><br>                        <div id="jsn-pos-breadcrumbs"><br>                            <jdoc:include type="modules" name="breadcrumbs"<br>                        </div>
```

Save the **index.php** file and upload it to your server overwriting the old file.

Promo area

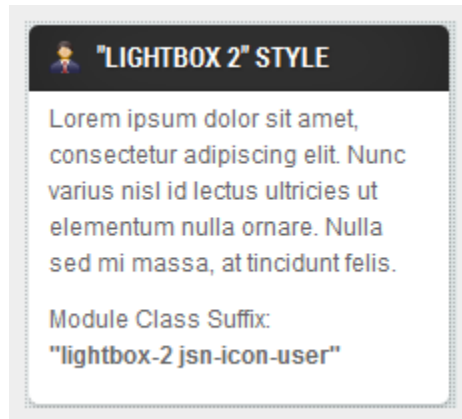

You can change background color, image, text color and many other parameters in promo area. Please take the following steps:

1. Open template CSS file **template.css**.
2. Find CSS selector **#jsn-promo** and modify attributes as desired.

Save the CSS file and upload it to your server overwriting the old file.

Modules styles

Box modules

By default, JSN Mico provides 6 module box styles, but you can have more very easily.

1. Open template CSS file depending on the parameter **Template Color** you are using. For example, if you are using **Grey** color then you open CSS file **grey.css**.
2. Find the following declarations and make a copy of them (search for the text string **lightbox-2** to find them)

```
div.lightbox-2 div.jsn-modulecontainer_inner h3.jsn-moduletitle {  
    background: #444;  
}
```

And modify as show below:

```
div.lightbox-4 div.jsn-modulecontainer_inner h3.jsn-moduletitle {  
    background: #XXX;  
}
```

You should change the hex code XXX of **background** to the new color you want.

3. Save the CSS file and upload it to your server overwriting the old file.

Now you can show your new module by setting parameter **Module Class Suffix** to **lightbox-4**.

Icon module header

By default, JSN Mico PRO comes with 20 UniIcons to be applied to module title. But sometimes you may want to use your own icons. For instruction about how to change this, please refer to section **UniIcons** in this document.

Content Area

How to customize link icons

By default, JSN Mico PRO comes with 23 pre-made icons to apply to links. But sometimes you may want to use your own icons. There are 2 common cases when you want to customize module header icons.

Upgrade an existing icon in sprite image file

This is the situation when you want a better looking icon but with the same meaning, i.e. icon name.

1. Create your own icon with size 18 x 18 and save it to separated (temporary) file;
2. Open the sprite image file **icons-ext.png** in folder **images/icons** in some graphic editor like Fireworks or Photoshop;
3. Drag your newly created icon file to the sprite image file opened in graphic editors and place it on top of the icon you want to customize;
4. Save the sprite image file and delete the temporary icon file if you want. Don't forget to compress the file with **PngOptimizer**.
5. Re-upload the file to the server overwriting the old file.

Now you should see your upgraded icon.

Add brand-new icon to sprite image file

This is the situation when you want to add a brand new icon to the sprite image file and use it. For example, you want to add an icon with symbol \$ to be attached to every link to www.cash.com or link with **class=" link-icon-ext icon-ext-cash"**. There are 2 stages involved:

Stage 1: Add new icon to sprite image

1. Create your own icon with size 18 x 18 and save it to a separated (temporary) file;
2. Open the sprite image file **icons-ext.png** in folder **images/icons** in some graphic editor like Fireworks or Photoshop and expand the canvas size to **86px** more;
3. Drag your newly created cash icon file to the sprite image file opened in a graphic editor, place it at the end of file with the distance of **70px** from the most bottom icon in the sprite image file.

Save the sprite image file and upload it to your server overwriting the original file.

Stage 2: Modification of template code for new sprite image

1. Open file **jsn_iconlinks.css** in folder **css** and add following code to the end of file

```
a[href*="www.cash.com"] {  
    padding-right: 20px;  
    padding-bottom: 1px;  
    background: url(../images/icons/icons-ext.png) no-repeat right -2064px;  
}  
  
body.jsn-direction-rtl a[href*="www.cash.com"] {  
    padding-right: 0;  
    padding-left: 20px;  
    background-position: left -2064px;  
}
```

2. Open file **template.css** in folder **css**, look for section extended link (search for the text string **EXTENDED LINK**) and add following code:

```
.link-icon-ext.icon-ext-cash {  
    background: url(../images/icons/icons-ext.png) no-repeat right -2064px;  
}
```

3. Open file **jsn_rtl.css** in folder **css**, look for section extended link (search for the text string **EXTENDED LINK**) and add following code:

```
body.jsn-direction-rtl .icon-ext-cash {  
    background-position: left -2064px;  
}
```

4. Save both CSS files and upload it to server overwriting the original file.
5. Now you can apply new icon in your content as following:

- a. `Cash Website`
- b. `Cash link`

Secondary promotion

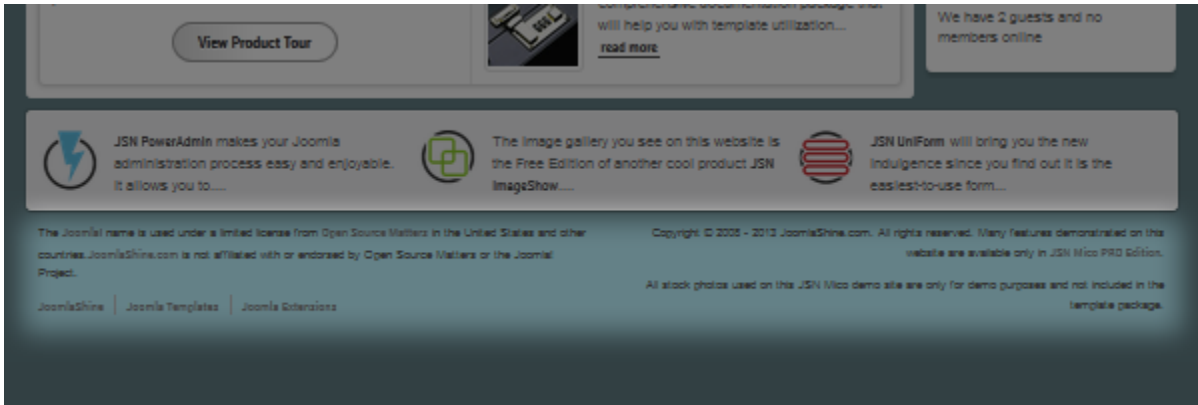

You can set up your desired background color, image, text color and many other parameters for this area. Please take following steps:

1. Open template CSS file **template.css**.
2. Find CSS selector **#jsn-content-bottom** and modify attributes as desired.

Save the CSS file and upload it to your server overwriting the old file.

Footer

By default, the footer area has white background, but you are free to change it.

1. Open template CSS file **template.css**.
2. Find CSS selector **#jsn-footer** and modify attributes as desired.

Save the CSS file and upload it to your server overwriting the old file.

What's next?

You have just finished reading the last and hardest documentation. By this time, you already learnt a lot about the template and we hope you love it. We developed this template with only one goal in mind: to bring more value for you and we hope we've succeeded with that.

Good luck to you and your business.

[For newbies] Download free e-books to build Joomla! websites

2 Free E-books, written by JoomlaShine Team

Building a Joomla website is a challenge with a lot of Joomla! newbies. To help you do this task more easily and quickly, JoomlaShine team released 2 FREE e-books: **Joomla! 2.5 Made Easy** and **Joomla! 3.x Made Easy**. Thanks to them, you get useful manuals whatever Joomla! version you use: Joomla! 2.5 – in 3 languages: English, German or Danish or Joomla! 3.x, - in 5 languages: English, German, Danish, Spanish or Vietnamese.

Both of them include 7 chapters as following:

- Get to know about Joomla! CMS
- Install Joomla! on local host
- Create content for your site
- Customize website appearance with a Joomla! template
- Arrange modules in positions
- Extend your website functionality with Joomla! extension
- Manage your Joomla! websites with JSN PowerAdmin
